

THE ACROBAT

DESCRIPTION

Different sizes available. 2 Types of finishing to choose from: Dibond mounting Uses an aluminium composite board with a polythene core and has become a very popular display solution. Your prints are printed to a fine art "giclee" quality on photo satin paper using fade-resistant inks and are then UV satin laminated for protection and durability. The picture will be framed in a box type frame, with the suspended picture on the inside so your print appears to float off the wall. Diasec Mounting Diasec mounting is the ultimate option for displaying imagery. A simply stunning finish is created by a unique patented bonding material "diasec" between the perspex and the print. The diasec combines with the light penetration and refraction of clear cast perspex to produce higher image definition, brilliant colour and fine detailed texture. The stunning custom made aluminium sub-frame (hanging system) finishes this luxurious product giving the diasec panel the appearance of floating away from the wall. This is the type of frame chosen by galleries as it promotes the durability of images.

SPECIFICATIONS

Features: This is part of a Limited Edition of 3 plus authors copy, or Only Print plus authors copy. You will receive a Certificate of Authenticity with this photograph as well as certificates issued by paper and ink manufacturers.
